

FOR IMMEDIATE RELEASE

EnableSoft Announces New Foxtrot RPA® Software

New Robotic Process Automation software helps organizations meet their data-entry needs, increases efficiency, productivity

Orlando, Fla., Feb. 22, 2017 – [EnableSoft Inc.](#), a provider of Robotic Process Automation (RPA) software for banks, healthcare and other organizations, has announced the release of its Foxtrot RPA® software (the automated employee®) to help operations executives, managers and personnel gain operational efficiencies through the increased automation of manual data-processing tasks.

With Foxtrot RPA, organizations can significantly improve operational efficiency by automating the routine and repetitive tasks of data entry, maintenance, integration, migration and testing. The solution's open, user-friendly design enables users with little to no existing IT knowledge to install and run scripts that perform business tasks in Excel™, Windows™, web and other legacy applications. EnableSoft's software reduces operational costs by essentially acting as an interface between disparate systems to download, open, select, enter, process or flag files.

"Within industries as diverse as banking, healthcare, insurance and manufacturing, there is a profound need to help organizations gain operational efficiencies by automating tedious, manual every day processes -- effectively freeing up talented staff members to focus on more impactful activities," said Richard Milam, CEO of EnableSoft. "With Foxtrot RPA, we have leveraged our proven experience, gained through more than 20 years of providing value to nearly 500 companies in 14 different industries, to carefully design a solution that directly helps our customers through improved HTML 5 support, new navigation tools and simplified error settings."

Foxtrot RPA is built with innovative .NET™ technology which supports the building and running of applications and XML™ web services. Foxtrot RPA enables organizations to work with more applications while featuring a new, bolder architecture. Organizations can automate system tasks by running PowerShell scripts and continue to use scripts initiated in previous versions of Foxtrot. Additionally, the software supports five new emulators, which enables it to imitate a particular device to run hardware or software programs, and Microsoft's newest operating system, Windows 10™.

About EnableSoft

As an early innovator in the Robotic Process Automation space, Orlando, Florida-based [EnableSoft Inc.](#) has helped organizations save time, save money, and improve productivity. Serving over 500 corporate clients worldwide, EnableSoft develops and markets Foxtrot, software that eliminates the burden of manual data processes by behaving, deciding and working just like a person.
